

WRU Replacement Pump

Trillium's WRU Replacement Pump provides a more affordable alternative to expensive OEM replacement pumps in your Edwards TPU, TCS, Kronis or Helios abatement system. Trillium has conducted extensive testing, along with fab field trials, and the results prove the Trillium WRU Replacement Pump performs as well or better than the OEM product. An initial replacement using the Trillium WRU Pump will require the full pump/motor assembly, as the existing OEM motor is incompatible, however subsequent replacements can be completed with the pump portion only. Trillium maintains these units in stock, ready for immediate shipment. Your Trillium sales representative will be pleased provide pricing and any additional information required.

Specifications
